

## Lecture Zero

### Introduction to Web Programming

#### Discussion

#### 1. What is the web development and what are types of it?

\_ web development is the art of constructing and maintaining web pages for websites by a web developer to give the user what he needs from the website.

There are three types:

1. Front end
2. Back end
3. Full stack

#### 2. What is difference between web developers and web designers?

Web designers and web developers are two distinct professions in the field of web development. Web designers are responsible for creating the look and feel of a website, while web developers are responsible for building the website's functionality and structure.

#### 3. Is the best for web developer to be full stack development or just one type of development?

To be full stack is the best because full stack is more specific than one type of development that includes the client and server side of the website (include front and back end).
